

Sweet Victory for Family

When Doris Fowler took a job at Nuttall's sweet factory in Doncaster she had no idea that it would eventually claim her life. She worked in the factory on the boiling pans. She boiled toffee to make the famous 'Nuttall's Mintoes' sweets. She was exposed to asbestos during this time. The pipes leading to the boiling pans were lagged with asbestos. This asbestos resulted in her eventual death from mesothelioma, an asbestos related cancer.

We were contacted by the niece of Doris shortly after her death in order to look into a claim. Doris had worked hard all of her life. She was only 72 years old when she died. We managed to trace old work colleagues whom she had worked with many years ago. They were able to provide us with information on her asbestos exposure. We also advertised in the Doncaster Star Newspaper and received an overwhelming response.

The case was funded on a 'no win, no fee' basis. Doris's brother was the Administrator of her Estate but his daughter who handled the claim was living in Cyprus. We were able to handle the claim via emails and telephone. The case settled for £45,000.00 in addition to government benefits. Fred thanked our firm for '*the professional and sympathetic manner in which you conducted this case*'. Of course the compensation will never bring back his much loved sister but at least he can now get comfort from the fact that somebody has been held accountable for her death.

About **John Pickering and Partners LLP**- Specialist industrial disease compensation solicitors.

[John Pickering and Partners LLP](#)- Specialist [mesothelioma compensation](#) solicitors

We are a specialist personal injury law firm. We have been handling claims for industrial disease for over 30 years. Most of our work involves acting for asbestos disease victims. We only act for the sufferers of asbestos diseases and never act for the organisations that caused the asbestos exposure or their insurers. We have an ethical approach and pledge to donate 10% of our net profits every year to good causes that help asbestos sufferers. [Click here](#) to find out about our donations to good causes. We have also been involved in most of the landmark judgments that shape this area of law. Find out more [about us](#) or find out about [our reported cases](#). We are on the panels of several asbestos support groups and are ranked highly by legal guides. [Click here](#) to find out more about what others have said about us.

[John Pickering and Partners LLP](#) is a niche legal practice that has represented Claimants in the leading asbestos "test cases" in the last ten years. The firm represented Sylvia Barker in *Barker v Corus (UK) Plc*, a case that highlighted the legal tactics of employers and insurers trying to cut back their compensation liabilities to mesothelioma sufferers, and which prompted the amendment of the Compensation Act 2006 to ensure full compensation for mesothelioma claims. The firm represented two of the three Claimants in the *Fairchild appeal*, in which the insurance industry tried unsuccessfully to block compensation altogether for mesothelioma sufferers unable to identify which of two or more sources of asbestos exposure had caused their illness.

The firm represented Alice Jefferson, a mesothelioma sufferer, whose illness and compensation claim against Cape Asbestos were featured in the important documentary "*Alice: A Fight For Life*." Shown by Yorkshire Television in July 1982, the programme was an important catalyst for legal change and public awareness of the plight of mesothelioma and other asbestos disease sufferers and a prompt for important legal reform.

Mesothelioma is a type of cancer that affects the lining of certain bodily organs. It most commonly affects the lining of the lungs (the pleura) but it can affect other areas including organs in the abdominal cavity (the peritoneum).

According to the [British Lung Foundation](#), more than 2,000 people are diagnosed with mesothelioma every year in the UK and there is one mesothelioma death every five hours. The number of deaths from mesothelioma increased from 153 in 1968 to 1,969 in 2004 and is expected to peak at 2,450 between 2011 and 2015.

The [British Lung Foundation](#), supported by John Pickering and Partners LLP, launched the first Action Mesothelioma Day on 27th February 2006, to raise

awareness about mesothelioma, to improve the treatment and care of mesothelioma patients, and to lobby for better funding for research into mesothelioma and for the protection and education of people working with asbestos.
